

Angular 20.3.10

Routing Fundamentals

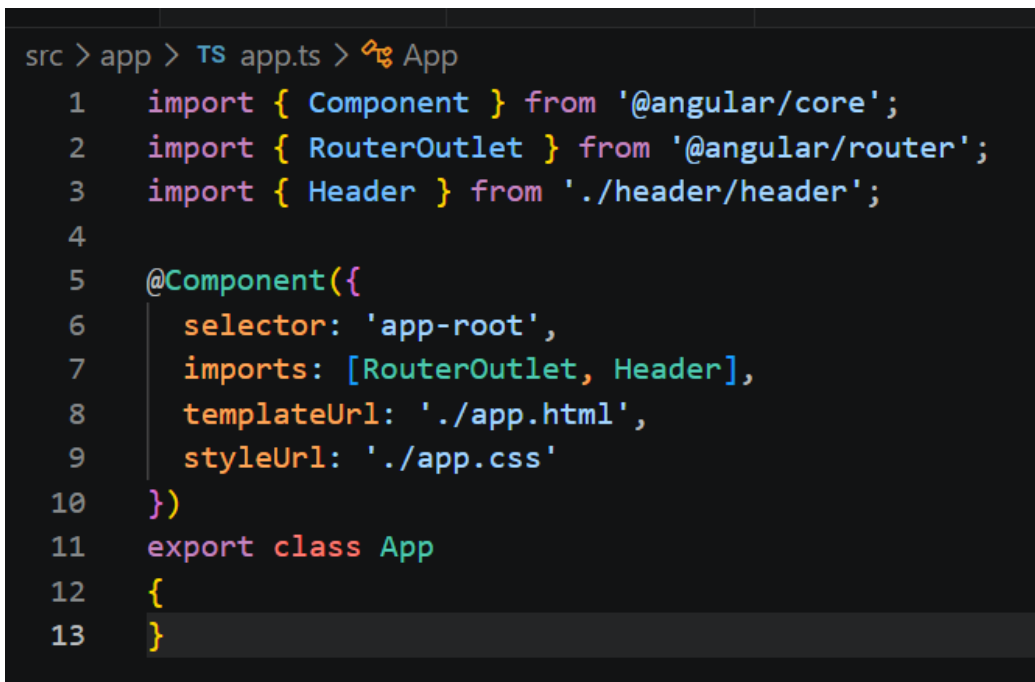

1- Create route in : app.routes.ts

The screenshot shows a code editor with a file explorer at the top displaying 'my first app' and a list of files: 'html', '# contact.css', '<> contact.html', '# header.css', and '<> app.html'. The main editor area shows the 'app.routes.ts' file with the following TypeScript code:

```
src > app > TS app.routes.ts > ...
1  import { Routes } from '@angular/router';
2  import { Home } from './home/home';
3  import { About } from './about/about';
4  import { Contact } from './contact/contact';
5
6  export const routes: Routes = [
7    { path: "home", component: Home },
8    { path: "about", component: About },
9    { path: "contact", component: Contact },
10   { path: "", redirectTo: "/home", pathMatch: "full" }
11 ];
```

2- App.ts : Add RouterOutlet

The screenshot shows a code editor with a file explorer at the top displaying 'my first app' and a list of files: 'html', '# contact.css', '<> contact.html', '# header.css', and '<> app.html'. The main editor area shows the 'app.ts' file with the following TypeScript code:

```
src > app > TS app.ts > App
1  import { Component } from '@angular/core';
2  import { RouterOutlet } from '@angular/router';
3  import { Header } from './header/header';
4
5  @Component({
6    selector: 'app-root',
7    imports: [RouterOutlet, Header],
8    templateUrl: './app.html',
9    styleUrls: ['./app.css']
10 })
11 export class App
12 {
13 }
```

3- App.html : add router-outlet

```
src > app > <> app.html > ...
Go to component
1 <app-header></app-header>
2 <main>
3 |   <router-outlet></router-outlet>
4 </main>
5
```

4- Template in the html : routerLink and routerLinkActive

Home

```
src > app > header > <> header.html > nav
Go to component
1 <nav>
2 |   <div class="header-container">
3 |     <div class="logo">
4 |       <h2>My App</h2>
5 |     </div>
6 |
7 |     <ul class="nav-links">
8 |       <li><a routerLink="/home" routerLinkActive="active">Home</a></li>
9 |       <li><a routerLink="/about" routerLinkActive="active">About</a></li>
10 |      <li><a routerLink="/contact" routerLinkActive="active">Contact</a></li>
11 |    </ul>
12 |  </div>
13 </nav>
```

- routerLink : កន្លែងដែលយើងអោយធ្វើការទៅ
- routerLinkActive = សម្រាប់ប្រាប់ថាវាទៅលើ link ណា

5- header.ts (We need to add RouterLink, and RouterLinkActive)

```
src > app > header > TS header.ts > ...
1 import { Component } from '@angular/core';
2 import { RouterLink, RouterLinkActive } from "@angular/router";
3
4 @Component({
5   selector: 'app-header',
6   imports: [RouterLink, RouterLinkActive],
7   templateUrl: './header.html',
8   styleUrls: ['./header.css'],
9 })
10 export class Header
11 {
12 }
13
```
